## Professional Summary

Results-driven Android Engineer with 4 years of experience specializing in mobile application development, reverse engineering, and mobile security analysis. Skilled in debugging complex Android systems, performing root-cause analysis, and securing applications against vulnerabilities such as code injection and data leaks. Experienced in analyzing logs, decompiling and optimizing Android apps for performance and resilience. Adept at collaborating with cross-functional teams to deliver stable, secure, and high-performance mobile solutions.

## Experience

**DoveRunner Inc** — San Jose, California
**Technical Support Engineer, Contract** — Jan 2025 - Present

- Provided technical support by troubleshooting application and mobile security product issues, performing root-cause analysis, and delivering clear, effective solutions.
- Managed support tickets end-to-end, ensuring timely resolution, SLA compliance, and clear communication with customers.
- Supported and maintained mobile security solutions, including secure mobile applications, authentication, encryption, and device protection.
- Collaborated with engineering and security teams to escalate complex issues, improve product stability, and enhance overall system security.

**PT Bank Rakyat Indonesia (Persero) Tbk** — Jakarta, Indonesia
**Android Developer, Contract** — Jan 2024 - Dec 2025

- Assess and recommend optimized configuration rules for Android mobile security tools
- Conducting comprehensive code reviews to ensure the quality, performance, and security of Android applications.
- Developed and optimized the mutual fund feature (Reksadana) for Bank Rakyat Indonesia, improving user engagement and streamlining transaction processes, resulting in a more efficient and user-friendly experience for customers.
- Developed the gRPC architecture powering the Stock (Saham) feature in BRImo, improving API efficiency and supporting the delivery of real-time trading data to end users
- Designed and implemented gold investment and printing functionalities, offering users seamless access to gold investment options and enhancing the overall user experience through efficient, streamlined processes.
- Developed the Investment Recap feature, implementing Lottie animations to create engaging and visually appealing user interfaces, enhancing user interaction and overall experience.
- Overhauled the DPLK (Defined Contribution Pension Fund) feature, significantly enhancing usability and ensuring smooth integration with existing systems, resulting in improved user satisfaction and increased operational efficiency.
- Contributed to the development of BRImo Junior, a child-friendly version of BRImo focused on financial literacy, supporting its release and ensuring smooth integration with the core banking features.
- Supported internal teams by preparing technical documentation and debugging guides for new releases.

**PalmVB** Singapore
**Fullstack Android Developer, Part Time** Jan 2025 – July 2025

- Engineered an Android application for custom EDC/kiosk hardware, integrating with third-party palm vein biometric scanners via embedded systems, enabling real-time device communication and enhancing hardware-level security authentication in high-sensitivity environments.
- Architected a modular Android framework tailored for custom kiosk environments, improving code scalability, maintainability, and team-level feature isolation, resulting in a 30% reduction in development time and streamlined onboarding.
- Developed and deployed scalable microservices using Spring Boot and Golang, purpose-built for Android-kiosk communication, with Docker-based containerization for efficient and maintainable deployment on resource-constrained systems.
- Conducted in-depth research into OSDP (Open Supervised Device Protocol), contributing to the team's ability to establish secure, interoperable communication between Android kiosks and external access controldevices laying groundwork for future compliance in secure facilities.

**KELOLA KARTA RAYA** Yogyakarta
**Android Kotlin Developer, Contract** Dec 2022 – Apr 2023

- Conceptualized and developed a scalable integrated distribution system with a point-of-sale (POS) Android app, enabling real-time synchronization with backend systems and significantly improving data accuracy, transaction processing speed, and operational visibility across retail outlets.
- Implemented robust security measures, including API token-based authentication and secure thermal printer integration, resulting in enhanced data integrity, error-free transaction printing, and secure multi-device support for field agents.
- Performed comprehensive penetration testing using advanced tools like MobSF, Frida, and Burp Suite to identify and mitigate vulnerabilities, reinforcing application security and ensuring robust protection against potential threats.

**Binar Academy** Jakarta
**Android Developer, Bootcamp** Aug 2022 – Dec 2022

- Led a team of Android developers to deliver a feature-rich flight ticket booking app using Kotlin, achieving a high-functioning MVP with a responsive and streamlined user experience that reduced friction in the booking process and supported rapid iteration.
- Designed the application architecture and user workflow, creating an intuitive interface that enhanced user navigation, improved feature discoverability, and promoted consistent engagement across the app.
- Managed end-to-end deployment of the FlitAirlines app on the Google Play Store, ensuring compliance with publishing standards.

## Project

**PLNS – Mobile Security Engineer**

- Strengthened Android app security by integrating a mobile security SDK with Frida and root detection, anti-tampering measures, and credential protection to prevent reverse engineering and unauthorized access.

**Metronome Engines – Android Reverse Engineer**

- Performed Android reverse engineering and automation for multiple clients, using Frida to bypass root, emulator, NFC, and SSL pinning checks. Built robust Python scripts to automate Android app interaction and web data scraping, integrating results into MongoDB. Focused on enhancing app security, testing, and backend data workflows through dynamic instrumentation and RPA techniques.

## Education

**AMIKOM UNIVERSITY** — Purwokerto
Bachelor Degree, Informatics Engineering. GPA 3.85/4.0 — Nov 2020 - Oct 2024
Thesis : Building a desktop application for point of sale integrated with hardware pager using C#, Spring Boot, NodeMCU, and Internet of Things.

**Bootcamp Binar Academy** — Jakarta
Android Developer — Aug 2022 - Oct 2022
Certificate as an Android Developer at Binar Academy after completing all kotlin course and able to pass final project to create proper android app.

## Certification

**CERTIFIED MOBILE PENTESTER (CMPEN-ANDROID)** — The SecOps Group
Certificate ID: 8953181 — July 2024

**CYBER SECURITY ENGINEER** — Merdeka Siber
Certificate ID: MS/BOCSE/HM/00223/2024 — Aug 2024

**CERTIFIED APPSEC PENTESTER(CAPen)** — The SecOps Group
Certificate ID: 9560587 — January 2025

## Awards

**BINAR ACADEMY** Jakarta
**Android Engineer** Dec 2022

- Certificate as an Android Developer at Binar Academy after completing all kotlin course and able to pass final project to create proper android app.

**Redhat Enterprise** Remote
**Redhat Linux Administrator** Feb 2023

- Certificate as as an Redhat Linux System Administrator after completing redhat training and certification and graduate with high grade.

## Skills

**Programming Languages :** Kotlin, Java, Golang, Spring Boot, Smali
**Security Tools :** Proguard, JADX, Frida, Objection, Ghidra, BurpSuite
**Database:** MySQL, SQL server, Firebase, MongoDB, Redis
**IDE/Development Tools :** Android Studio, Visual Studio Code, Visual Studio, IntelleJ IDEA
**Version Control :** Git
**Support & Diagnostics:** Logcat, ADB, Wireshark, Crashlytics, Sentry, Postman, Jira, Confluence, Docker logs
**Incident Management:** Root-cause analysis, SLA tracking, knowledge base documentation, Jira
**Language:** Indonesian, English
